

KIRAN GHOLAP

SR DATA SCIENTIST

Pune, Maharashtra ,IN | 8484036424 | kirangholap98@gmail.com

PROFILE SUMMARY

Data Scientist with around 4 years of experience delivering high-impact Machine Learning, Deep Learning , Statistical ,NLP and Generative AI solutions. Backed by strong statistical expertise and an MBA, enabling a unique blend of analytical depth and business leadership. Proficient in statistical analysis, data cleansing, feature engineering, modeling, and deploying production-scale systems. Specialized in e-commerce optimization, customer journey analytics, and conversion improvement through data-driven strategies.

TECHNICAL SKILL

- **Python/ML Packages:** NumPy, Pandas, Scikit-learn, Seaborn, RegEx ,Tensersflow , Pytorch, matplotlib
- **Machine learning:** Decision Tree, Linear Regression ,Ridge & Lasso Regression, Logistic Regression, Naïve Bayes Classifier, KNN, SVM, Random Forest, Gradient Descent, Xgboost ,Ada- Boost,Anomaly detection, K-means Clustering ,ANN,RNN, LSTM
- **Statistics :** A/b Testing ,Hypothesis Testing , Probability, Data Distributions ,Central Limit Theorem
- **Natural Language Processing :** NLTK , TF-IDF, Word2Vec ,Bag of Words ,Keyphrase Extraction ,RAKE ,YAKE, Attention mechanism , transformer architcture
- **Gen Ai:** Rag, LLM,Transformer Langraph,Langchain,Agentic ai,Transformers,Foundation models
- **Time-Series Analysis:** AR, MA, ARIMA, SARIMA models, FBprophet
- **Cloud Platforms/Services :**AWS,S3, Sagemaker ,EC2 ,Redshift
- **Database :** Mongo DB, SQL
- **Other :** Google Analytics , Google Sheets,Visualisation ,Docker,Tableau ,Jira ,Asana,HUBSPOT

WORK EXPERIENCE

1. Sr Data scientist Brandlock LLC ,Mumbai

12/ 2022- present

Role/Tasks

- A professional with strong knowledge of Ecommerce domain. Experience in developing Ai products to optimize user journey in Ecommerce platform.
- Responsible for analyzing large and complex dataset to extract insights about data for model building
- Initialize Project flow with proper definition of problem statement with POC. Build EDA and check proper balancing of dataset with different tools.
- Use, build ,train Supervised and Unsupervised ML Algorithms with desired accuracies of clients and domain expertise.
- Brainstormed with data personnel to define data modelling standards for project.
- Responsible for New product development in ecommerce user journey optimization'
- Exposure to Time Series ,Deep learning and Natural language Processing,Gen ai , LLM

PROJECT

Project Name : Frustrated shopper identification in ecommerce platform using AI

- Developed a product to identify frustrated shoppers on e-commerce platforms using ML/AI techniques to enhance user experience and improve conversion rates and revenue.
- Identifying frustrated shoppers is crucial as it allows businesses to take proactive measures to improve user experience, retain customers, and increase customer satisfaction and loyalty.
- Involved in the project from scratch, Conducting research and selecting algorithms , Determining relevant attributes.
- Explaining the product and its benefits to clients.
- Developing evaluation metrics to assess model performance.
- Creating an automated system for real-time identification of frustrated shoppers.
- Implementing A/B testing and hypothesis testing to validate the effectiveness of the solution.
- Outcome:
- Successfully identified frustrated shoppers, enabling proactive measures to improve user experience.
- Delivered the highest incremental revenue among all products.
- Recognized as the most successful product.
- Tools & Techniques: Python, AWS, Machine Learning ,Statistical Modeling , Ab testing, MLops

Project Name : Malicious Script Detection System

- Developed a Malicious Script Detection System for e-commerce platforms to enhance user journey optimization by preventing distractions from unnecessary and harmful scripts.
- Conducted requirement analysis in daily meetings.
- Performed data cleaning and pre-processing.
- Extracted relevant features from scripts, Used recursive feature elimination technique.
- Trained models using Logistic Regression, Decision Tree, Random Forest, and other classification models
- Achieved highest accuracy with the Random Forest model.
- Evaluated model performance based on Recall Score and ROC-AUC metrics.
- Successfully identified and mitigated malicious scripts, enhancing user experience and security across various e-commerce platforms.
- Tools & Techniques: Python, AWS, Machine Learning, DL, , NLP, Statistical Modeling, Docker

Project Name : InsightGen – Customer Feedback Intelligence using Generative NLP

- Built a GenAI and NLP-driven customer feedback analysis system for new product launches, using TF-IDF, Word2Vec, RAKE/YAKE, and semantic clustering to extract key insights and root causes behind customer satisfaction trends.
- Review Analysis and Root cause analysis for latest product launched by organization
- Categorization and Restructuration of Data. To carry out Text processing like removing stop words, Lemmatization, stemming
- Performed Tokenization and created data frames by using Count vectorizer like Bag of words and TF-IDF. ,word embedding using word2vec-CBOV,Key Phrase extraction using Rake ,Yake ,N Grams
- Coordinate with different functional teams to implement models and monitor outcomes.
- Tools & Techniques: Python, SQL, AWS, Machine Learning, , NLP, LLM , Statistical Modeling, Docker

EDUCATION

BSc Statistics	06 – 2018
Fergusson college , Pune	
MBA Operations	06 – 2020
Pune University	

LANGUAGE

English	Hindi
Full Professional Proficiency	Full Professional Proficiency
Marathi	
Native Language
